

Overnight Lamb Shoulder — The Science-First Version

A collagen-rich cut turned spoonable by time alone — dry-brined overnight, slow-roasted while you sleep, then blasted for the bark.

Yield: **10–12** (one shoulder) Active: **20 min** Total: **~12 h** Oven: **115–235°C** Done: **90–95°C** internal

WHERE IT WAS BORN The cheap, hard-working cut the whole Mediterranean slow-cooks — Greek <i>kleftiko</i> , Moroccan <i>mechoui</i> , Italian <i>spalla</i> . The feast roast of shepherds, not aristocrats.	EATEN, AUTHENTICALLY Pulled or carved with its own jus, soft polenta or roast potatoes and greens — a centrepiece built for a crowd and a long table.	HOW IT’S USED NOW The Sunday/feast roast; the leftovers are gold — <i>ragù</i> , shepherd’s pie, flatbread tacos. Feed the crew twice off one cut.

INGREDIENTS

ONE ~3 KG SHOULDER · WEIGHT

ROAST

Bone-in lamb shoulder	3kg
Fine sea salt (<i>dry brine</i>)	45g · 3 tbsps
Garlic, crushed (<i>a head</i>)	30g
Rosemary (<i>+ thyme</i>)	15g
Ground cumin	6g · 2½ tsp
Ground coriander	6g · 2⅞ tsp
Black pepper	4g · 1¾ tsp
Olive oil (<i>for the blast</i>)	30g · 2¼ tbsps

TRAY

Onions + carrots (<i>a bed</i>)	—
Stock or water	250g · 1 cup

THE RATIO — SALT 1.5% OF THE MEAT
Dry brine = 1.5% salt by the shoulder’s weight; aromatics to taste. Everything scales off the cut — weigh the shoulder, take 1.5%.

Kit: deep roasting tray + rack · foil · probe thermometer · the patience to leave it alone overnight

METHOD

- Dry-brine (night before).** Crosshatch the fat cap; rub 45g salt + garlic, rosemary, cumin, coriander, pepper all over. Uncovered in the fridge overnight.

Salt penetrates and seasons deep; the surface dries for a better crust. — McGee 2004
- Low slow-roast.** On a bed of onion + carrot, 250g stock in the base, covered tight with foil. **115°C (240°F), 8–12 h**, to internal **90–95°C** (the bone wiggles free).

Collagen melts to gelatin low and slow without squeezing out moisture; the window is wide and forgiving. — McGee; López-Alt
- The blast.** Uncover, drizzle 30g oil, crank to **235°C (455°F)**, 20–30 min, to a dark, crisp top.

High heat drives the Maillard bark you can’t get at low temperature. — McGee 2004
- Rest & pull.** Rest 30 min tented; pull into chunks or carve.

Done: internal **90–95°C**, the meat pulls with a spoon and the bone slips free, dark crisp top. **Rest 30 min before pulling.**

The jus — tip the tray juices into a pan, skim the fat, reduce, check seasoning. The onion-carrot bed has done the work; that is your gravy. Spoon over the pulled meat.

ONE SHOULDER, TWO SERVICES
Serve the roast hot with jus; the next day the shred becomes **ragù** for pasta, a **shepherd’s pie**, or **tacos / flatbreads**. One cheap cut, two crew meals.

ELEVATION		
TIER 1 — NO EXTRA TIME Anchovy + garlic studs — melt in, season deep Wine or cider — a splash in the tray Longer brine — 24 h is even better	TIER 2 — WORTH IT Kleftiko — seal in paper/foil, skip the blast Harissa + ras el hanout — Moroccan Finish on coals — smoke + char	TIER 3 — SERVICE Pull + crisp bits for texture Mint / salsa verde to cut the richness Bone-marrow jus for depth

TROUBLESHOOT

Tough / chewy	Under-done → it needs MORE time to 90–95°C, not less
Dry	Oven too high / lid off → keep it low, keep it covered
No bark	Skipped the blast → uncover, 235°C, 20–30 min
Greasy jus	Fat not skimmed → spoon it off the tray juices

CHARTER PREP & STORAGE

Hands-off	In at night, ready for lunch — the sleeping-galley roast
Holds	Warm, tented, 1–2 h without drying
Reheats	Beautifully, in its own juices
Freeze	Pulled, in jus, 1 month
Best for	Passage / yard nights; big covers; a cheap cut
